

Q & A About LED Photo Therapy

Q What is the Cold Light?

A The Cold Light™ is an LED (light emitting diode) that will not heat and destroy tissue like a traditional medical laser. The Cold Light™ sends specific light energy into the dermal tissue to stimulate cellular activity and collagen production. When combined with appropriate serums and gel the Cold Light™ enhances the treatment of rosacea, acne, sun damage and other stubborn skin conditions.

Q How long do treatments take?

A Treatments are simple to perform and take between 15 to 20 minutes. You may very well see results in the first treatment. For long lasting results a 6 - 8 week series twice per week is recommended.

Q Is the Cold Light safe?

A Yes, the Cold light is completely safe. The energy delivered by the Cold Light™ produces little heat and will not burn the tissue like a medical laser. The Cold Light™ transmits light energy to deeper skin cells in the same manner that the sun's light stimulates plant cell growth. The Cold Light™ energy is a regenerative and stimulates collagen and new skin cell growth.

Q Does it hurt?

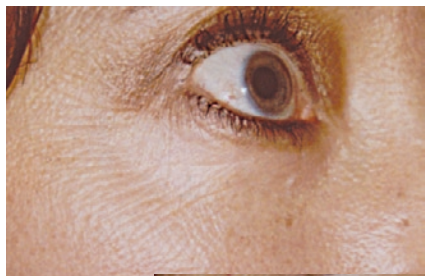

A No, it actually feels comfortable and relaxing! Your skin will feel firm and hydrated.

Q Will the Cold Light™ help with hyperpigmentation?

A Yes, combining the Cold Light™ energy with specific serums designed to suppress melanocyte production will lighten darker spots on the skin with a series of treatments.

Q What kind of results can I expect?

A You will see and feel an immediate plumping and softening of your skin and others will be amazed at the freshness and glow of your face. This initial result is somewhat temporary. It takes about six to eight weeks for collagen to be produced and to show a more permanent result on your face. Your face will look better and better with each treatment.

BEFORE

AFTER

Q Will the Cold Light™ help acne?

A Yes, the blue light will help kill the bacteria that causes acne.

Q Will the Cold Light™ help dry skin?

A Yes, the Cold Light™ will dramatically enhance the hydration from the first treatment forward.
